Contents

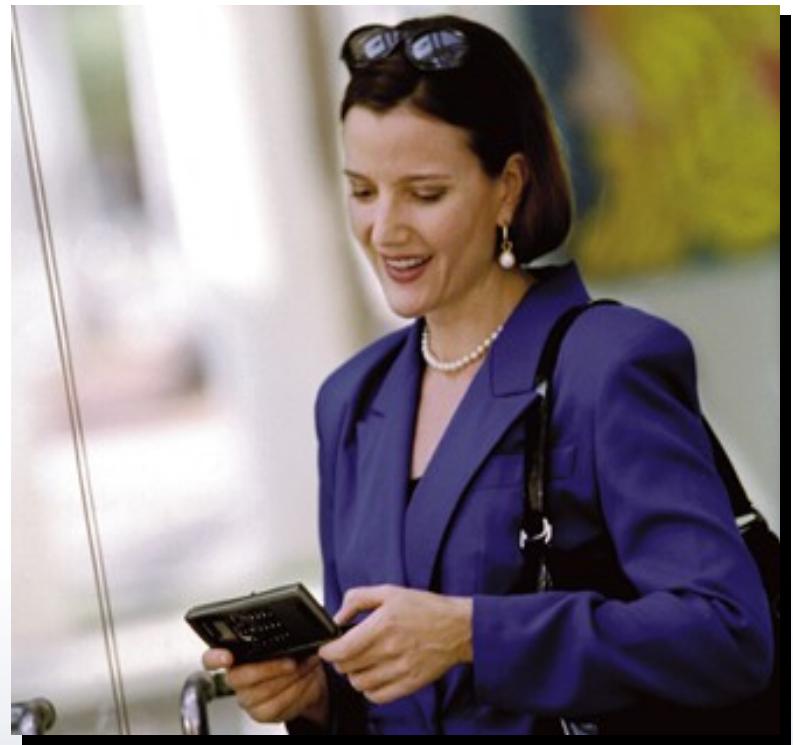

- Mobility - new behaviors and new value domains
- Mobilizing the Enterprise
- Segmentation Approach
- Enabling End-to-End Solutions

Behaviors

From Turun Sanomat Extra

New Behaviors

"A qwerty in every pocket"

NOKIA

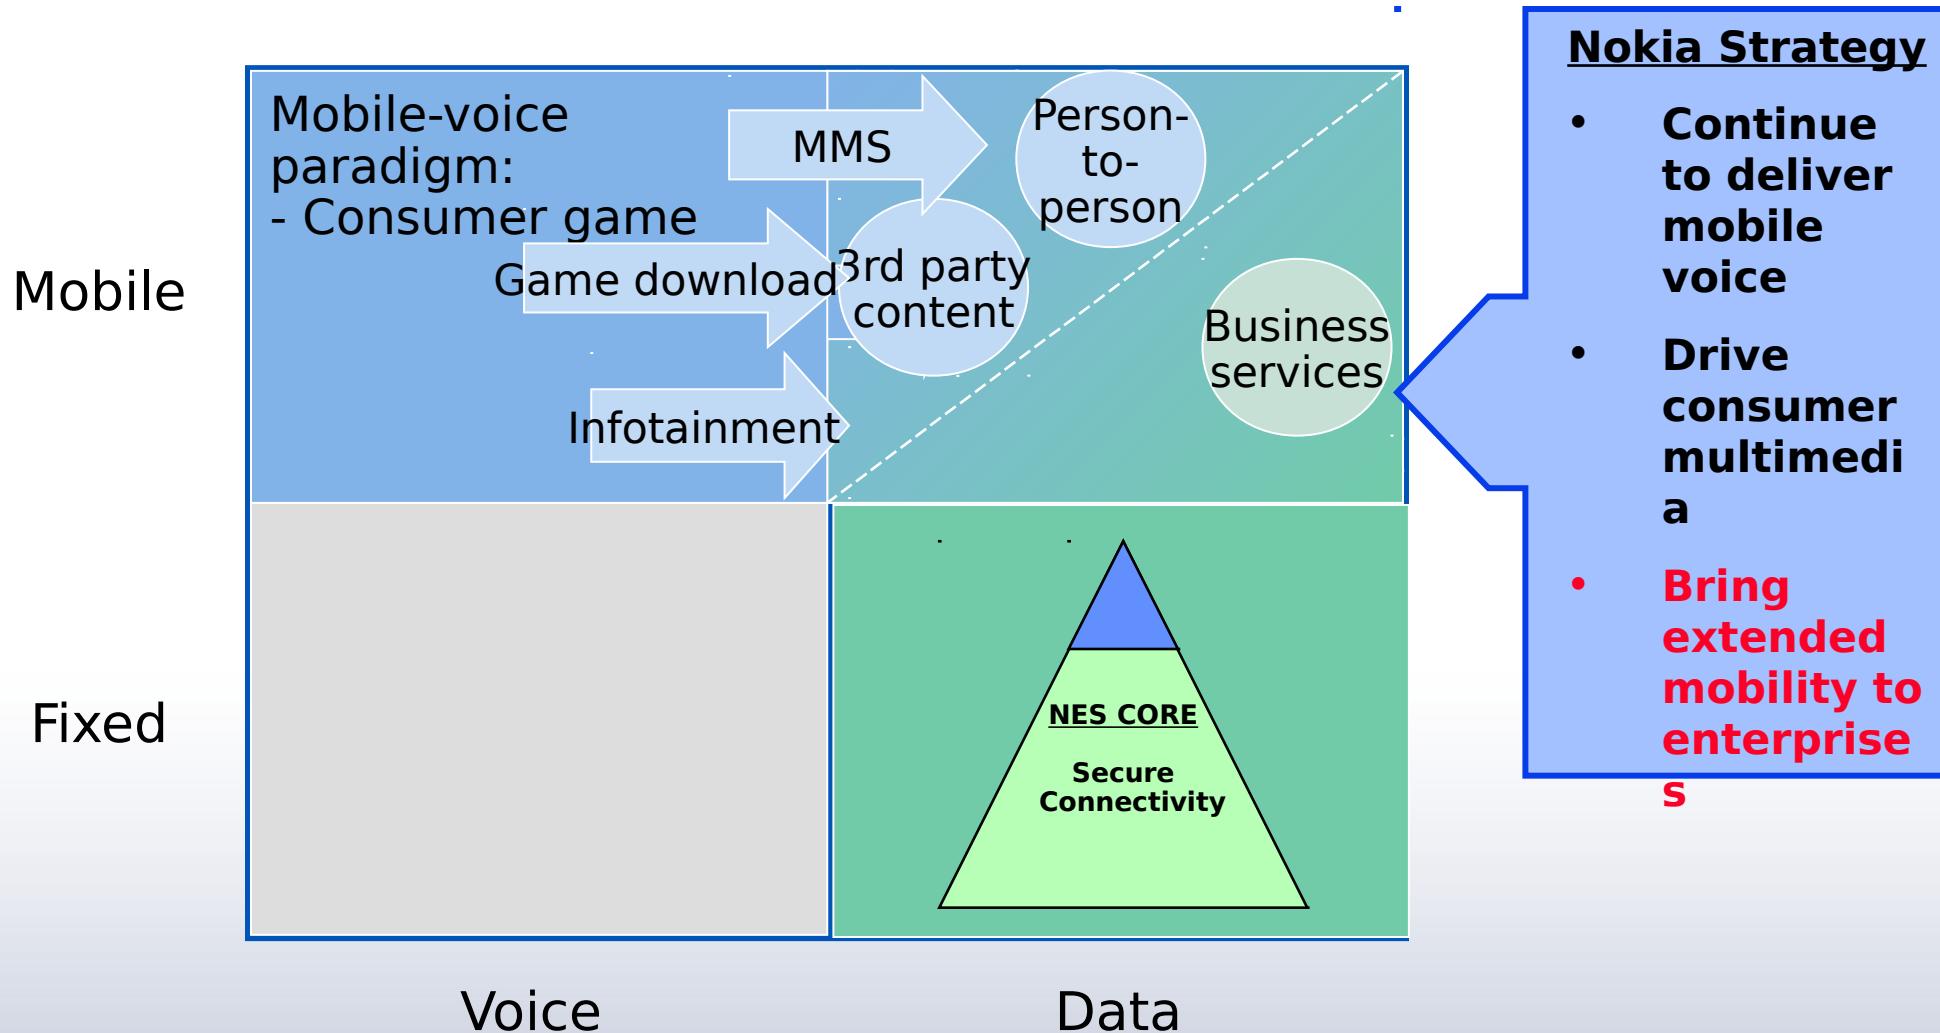

Mobility = new behaviors = new value domains

- Focus on mobile worker needs
- Work on the move is different from the work at the office
- For a mobile worker, being connected means a selection of communication methods available while on the move
- Open standards enable maximum interoperability

Enterprise attitudes to mobility

- Enterprises that consider mobility as an expense don't understand mobility
- Enterprises that are utilising mobility
- Enterprises that have made mobility a part of their core business strategy

Nokia Strategy

Mobilizing the Enterprise

Work Goes Mobile

- Enterprises of all sizes are being extended
- Increasingly, this extension is occurring via mobile connections
- The requirement for 'any device to any content' must be satisfied
- Information Security moves from barrier to key business enabler

Optimum mobile investment is a combination of hard business criteria and individual worker's needs

Mobile Worker

IT Manager

Business Owner

I prefer:

- Functionality
- Ease of use
- Personality
- “Irrational aspiration”

I am concerned with:

- Security
- Connectivity
- Performance
- Terminal management
- Applications

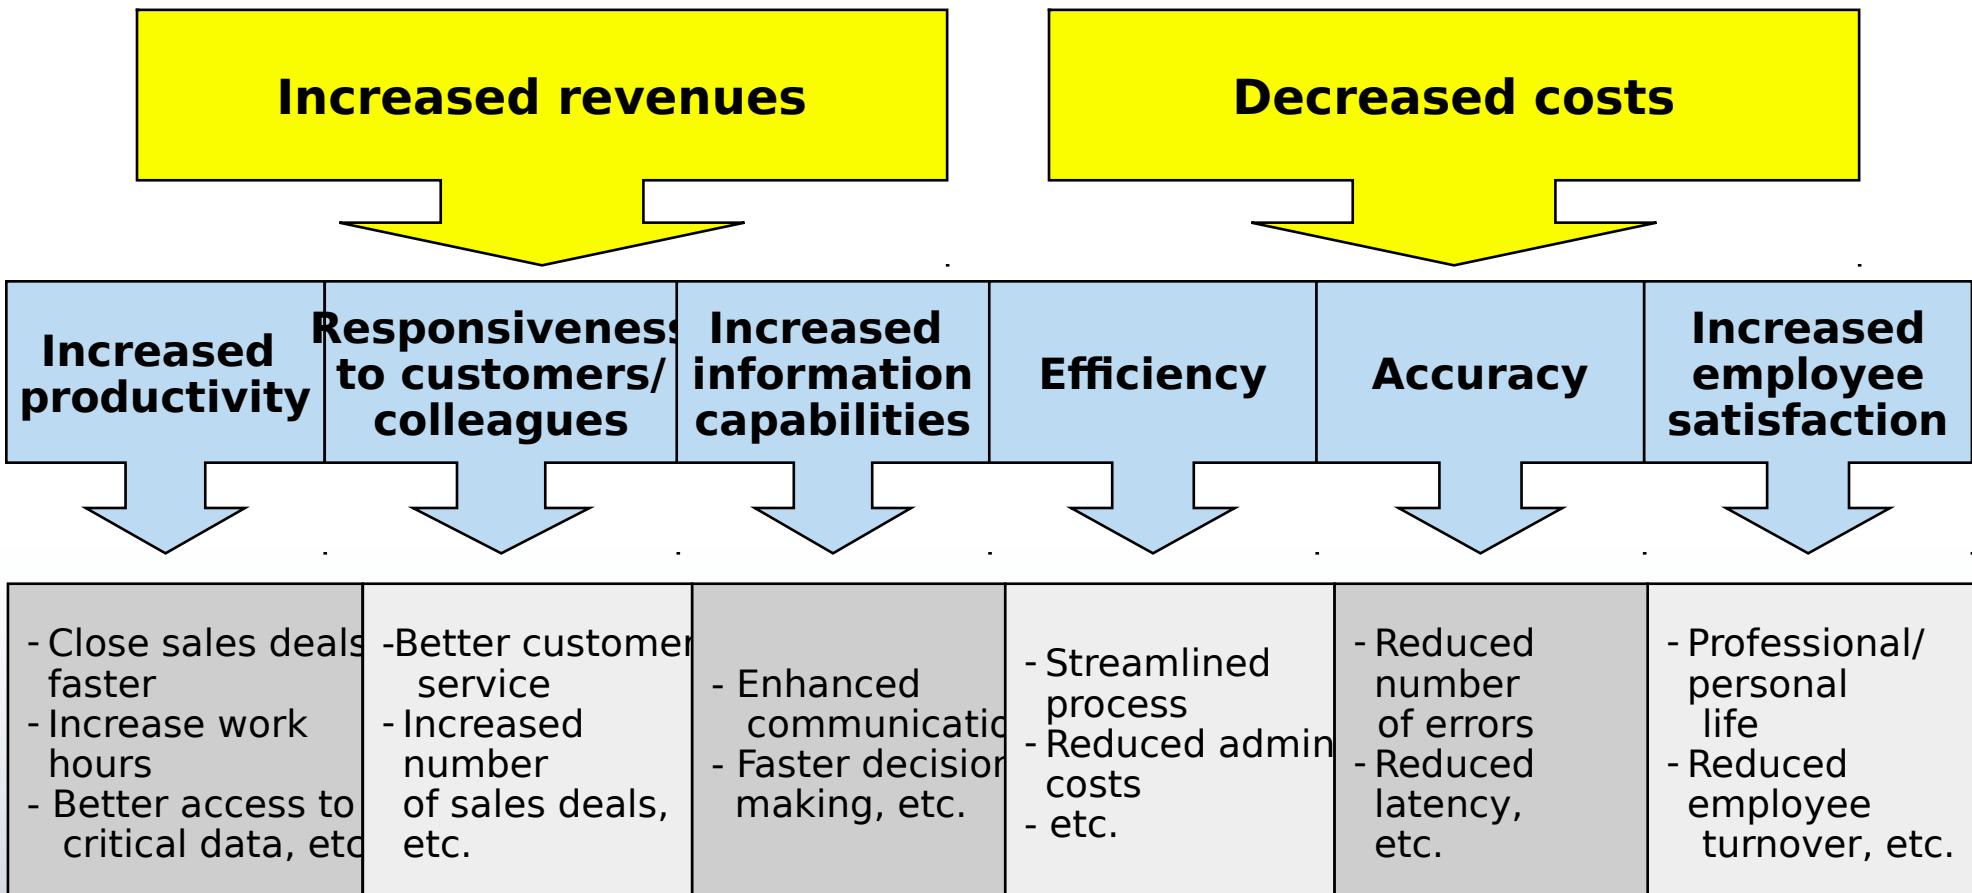

I base my decisions on:

- Business benefits and ROI
- Total cost of ownership
- Improved productivity
- Employees' quality of life

A well-planned ROI strategy includes multiple benefits

Where would your company gain benefits by mobilizing some process?

ROI Tool Quantifies the Benefits of your Mobile Project

Original source: Gartner 2002, modified by Nokia

Segmentation approach

One size does not fits all...

Employees need a multitude of services - but not everyone needs all services

Business processes

Office applications (Notes, MS) and company specific vertical applications (CRM, SFA, FRP,...)

Business connectivity

Access to intranet from PC/laptop/ terminal

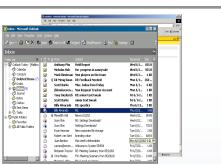

PIM

Calendar, phonebook, contacts

e-mail

e-mail to PC or mobile

Messaging

Voice, SMS, MMS, instant messaging

Voice

Calls in office and on the move

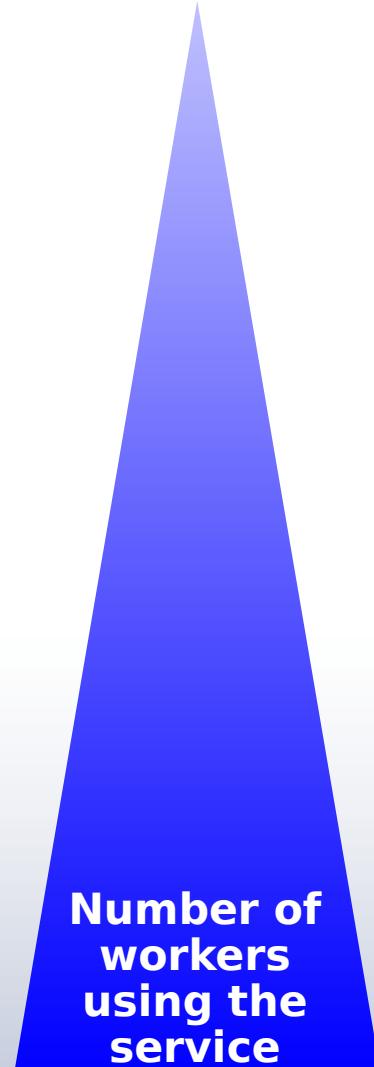

Person-to-System
(company specific apps like Notes, CRM,...)

Person-to-Person
(general business apps voice, e-mail,...)

Number of workers using the service

NOKIA

Segmentation Thinking

Right size, features and price for individual business user's needs

Series 40

Series 60

Series 80

Typical device formats

Typical screen sizes

128 x 128

176 x 208

640 x 200

Full range of business optimized products

With consistent system features across all terminals

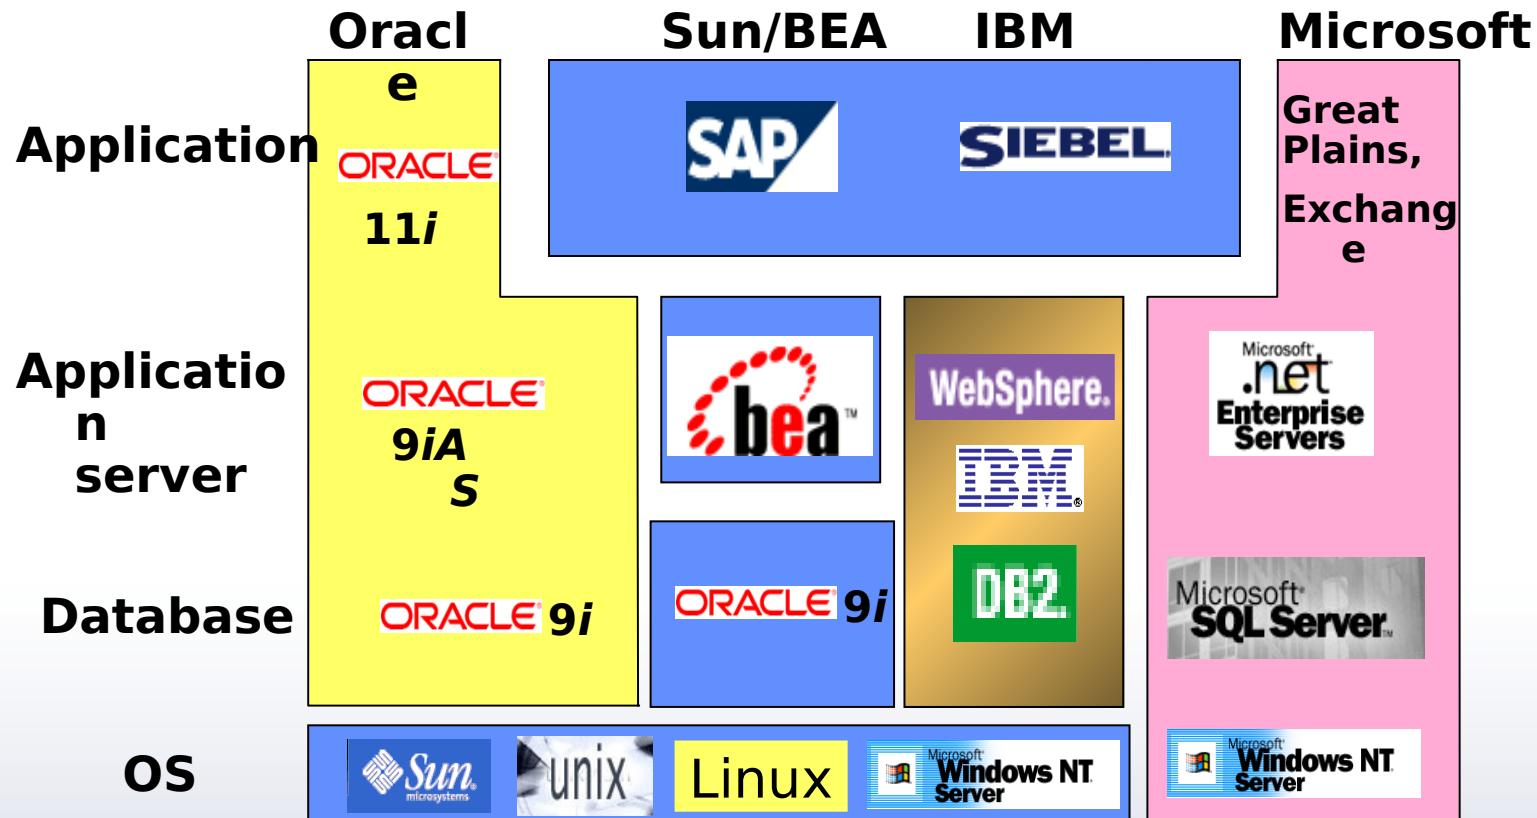

End-user needs	Mobile solution	
Access to back-office applications		<ul style="list-style-type: none">• Access to back-office applications• Mobile document creation• Messaging with e-mail attachment support• Mobile voice (conference call)
Person-to-person messaging		<ul style="list-style-type: none">• Messaging with full QWERTY keyboard• Mobile voice (speakerphone, conference call)
Personal information management		<ul style="list-style-type: none">• Messaging with integrated camera• Mobile voice (speakerphone, conference call)
Mobile voice		<ul style="list-style-type: none">• Mobile voice• Basic messaging
Laptop user		<ul style="list-style-type: none">• Mobilize laptop• Laptop access to corporate intranet

- **Personal Information Management (PIM)**
- **Mobile e-mail support**
- **Back-up**
- **Synchronization**
- **Connectivity to IT infrastructure**
- **Terminal security**
- **Terminal management**
- **OTA settings**
- **Development tools**

Enabling end-to-end solutions

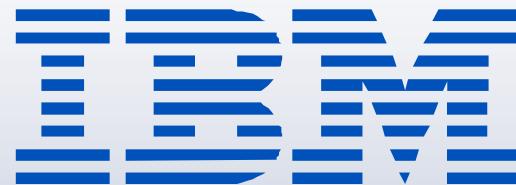

The Back-End Stacks

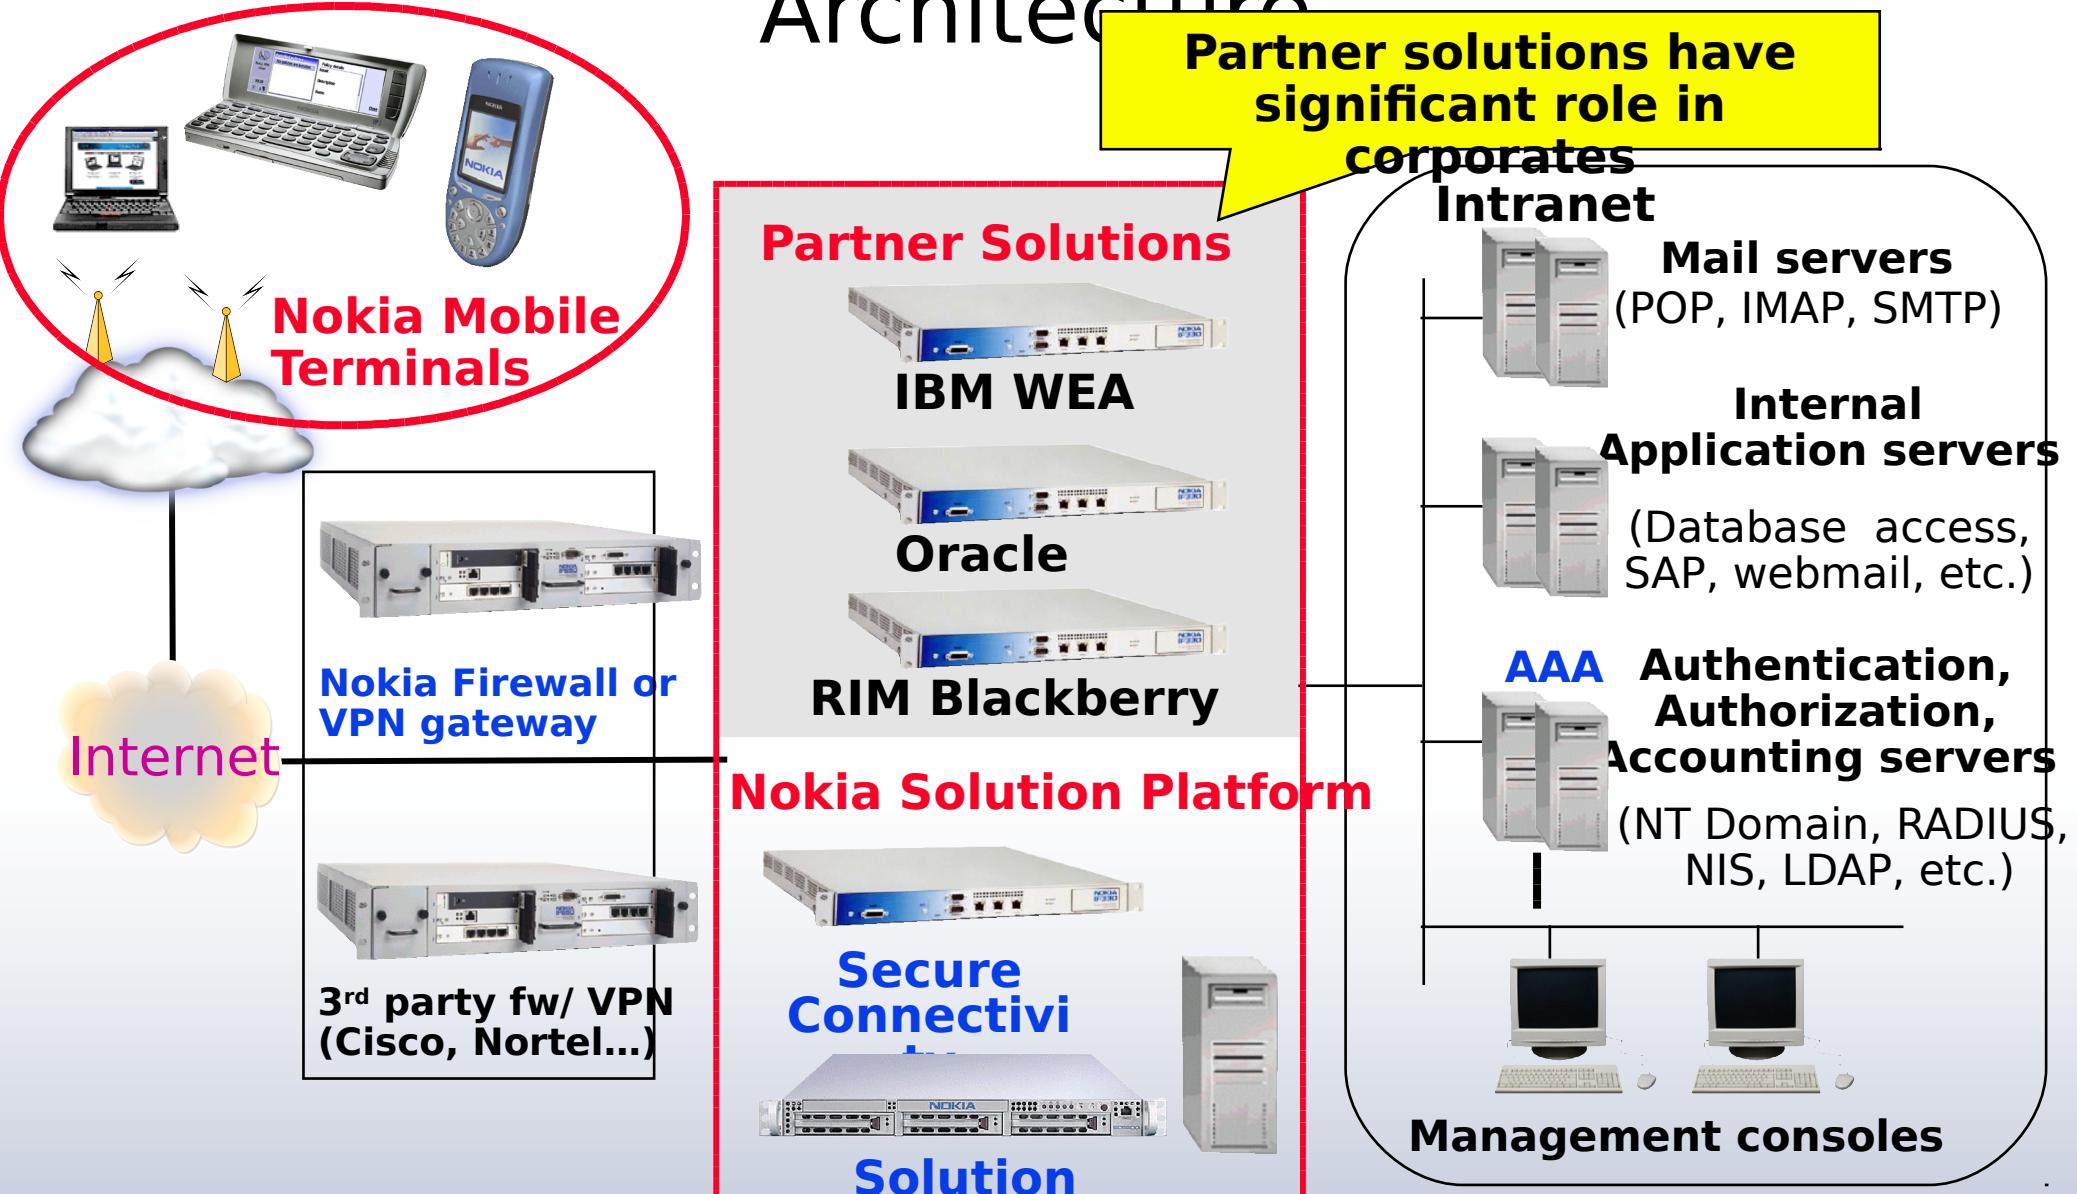

Source: McKinsey

Co-operation with leading companies

- Working with leading IT vendors for end-to-end solutions
- Terminal platforms:
 - IBM, Oracle, Research In Motion
- Mobile security and gateways:
 - Check Point, Trend Micro, F5, ISS
- Nokia email solutions interoperate with Microsoft exchange server, Lotus Notes, Novell Groupwise, SUN IPlanet and any other POP3 and IMAP4 email
 - Nokia One

End-to-End View: Network Architecture

Nokia's Total Enterprise Offering

- Range of business terminals
- Fixed perimeter security (device security, security management)
- Mobile security & gateway solutions
- A range of solutions for operator enterprise offerings
- Nokia M2M (machine to machine) solutions
- Enhancements
- Third party mobile enterprise application development through Forum Nokia

Nokia Mobile VPN

- **Nokia Mobile VPN for Enterprises using Symbian based devices for mobile workers**
 - Require secure, reliable access to corporate services and applications
 - Nokia Mobile VPN for Symbian provides end-to-end security from terminal to enterprise VPN gateway
- **Based on open IPSec standards**
 - DES and 3DES for encrypting data connection to your enterprise
 - SHA-1 and MD5 for preserving integrity of data during connection
 - Legacy and PKI authentication for checking identity of mobile workers
- **Easy for mobile workers to use**
 - Built in Help
 - Automatic policy deactivation if inactive for a period of time
 - Automatic policy updates via Nokia SSM

Nokia Secure Access System

Action	Condition	Disable	Delete	
SCAN_good_files	IF CLIENT_IP == "10.0.23.0/24"	<input type="checkbox"/>	<input type="checkbox"/>	Edit
SCAN_bad_ports	IF USERNAME == "scan"	<input type="checkbox"/>	<input type="checkbox"/>	Edit
Omni	IF USER_GROUP == "Eng"	<input type="checkbox"/>	<input type="checkbox"/>	Edit
SCAN_good_processes	IF BROWSER_USER_AGENT == "**MSIE**"	<input type="checkbox"/>	<input type="checkbox"/>	Edit

- Enables secure access:
 - for employees and business partners
 - from any standard Internet browser
 - to web-enabled and client/server applications
 - virtually any time, anywhere
- Uses ubiquitous SSL
- Runs on proven Nokia IP Security Platforms & IPSO

Nokia Access Mobilizer

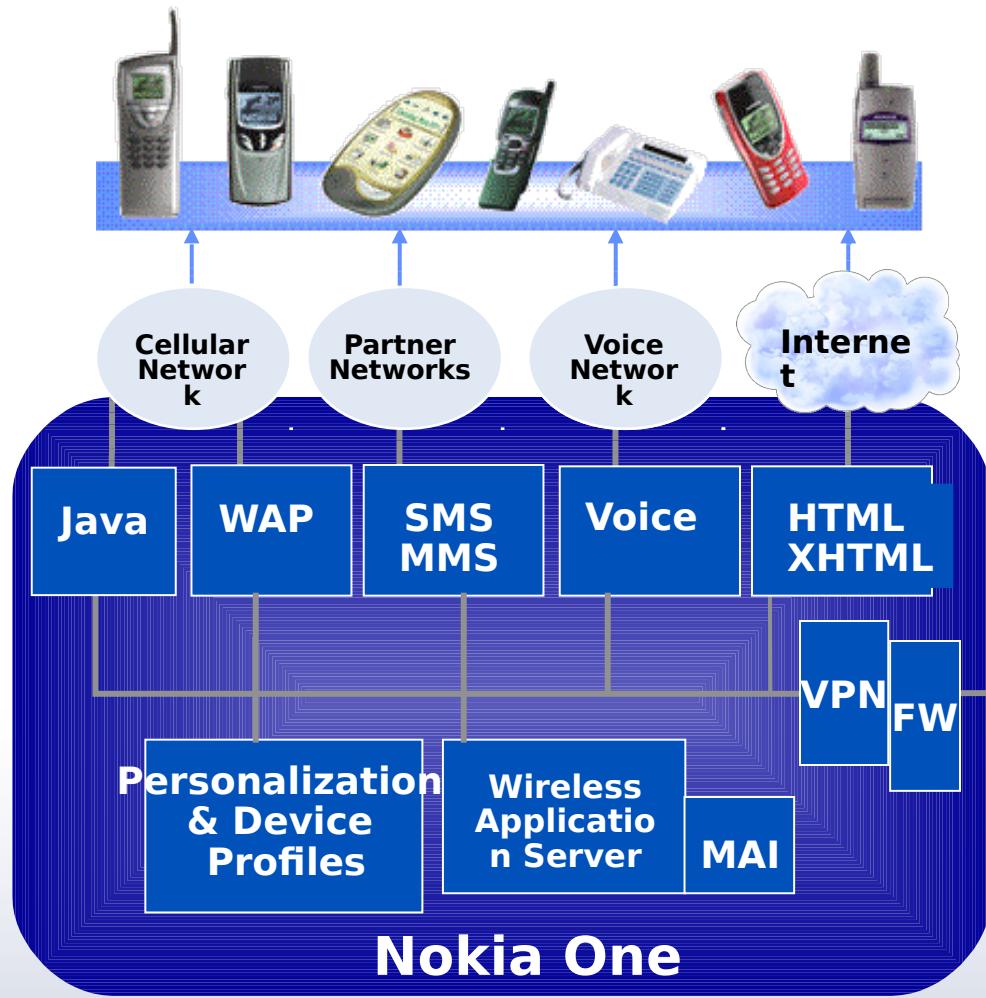

- What is it?
 - A server-based mobility solution
 - Software that provides access to core applications like email (including rich attachments) and PIM
 - A solution that automatically repurposes existing web and office documents and intranet-based applications
- What Problem Does It Solve?
 - Extends the reach of the information available in their current network infrastructure
 - Supports access to any content from any device, over any network
 - Integrates with Exchange, Domino, GroupWise, standard web servers
 - Supports access to popular 3rd-party email systems
 - Runs on IPSO-SX, Solaris, and Linux
- What do you need to make it work for you?
 - A browser-equipped mobile device that fits your needs

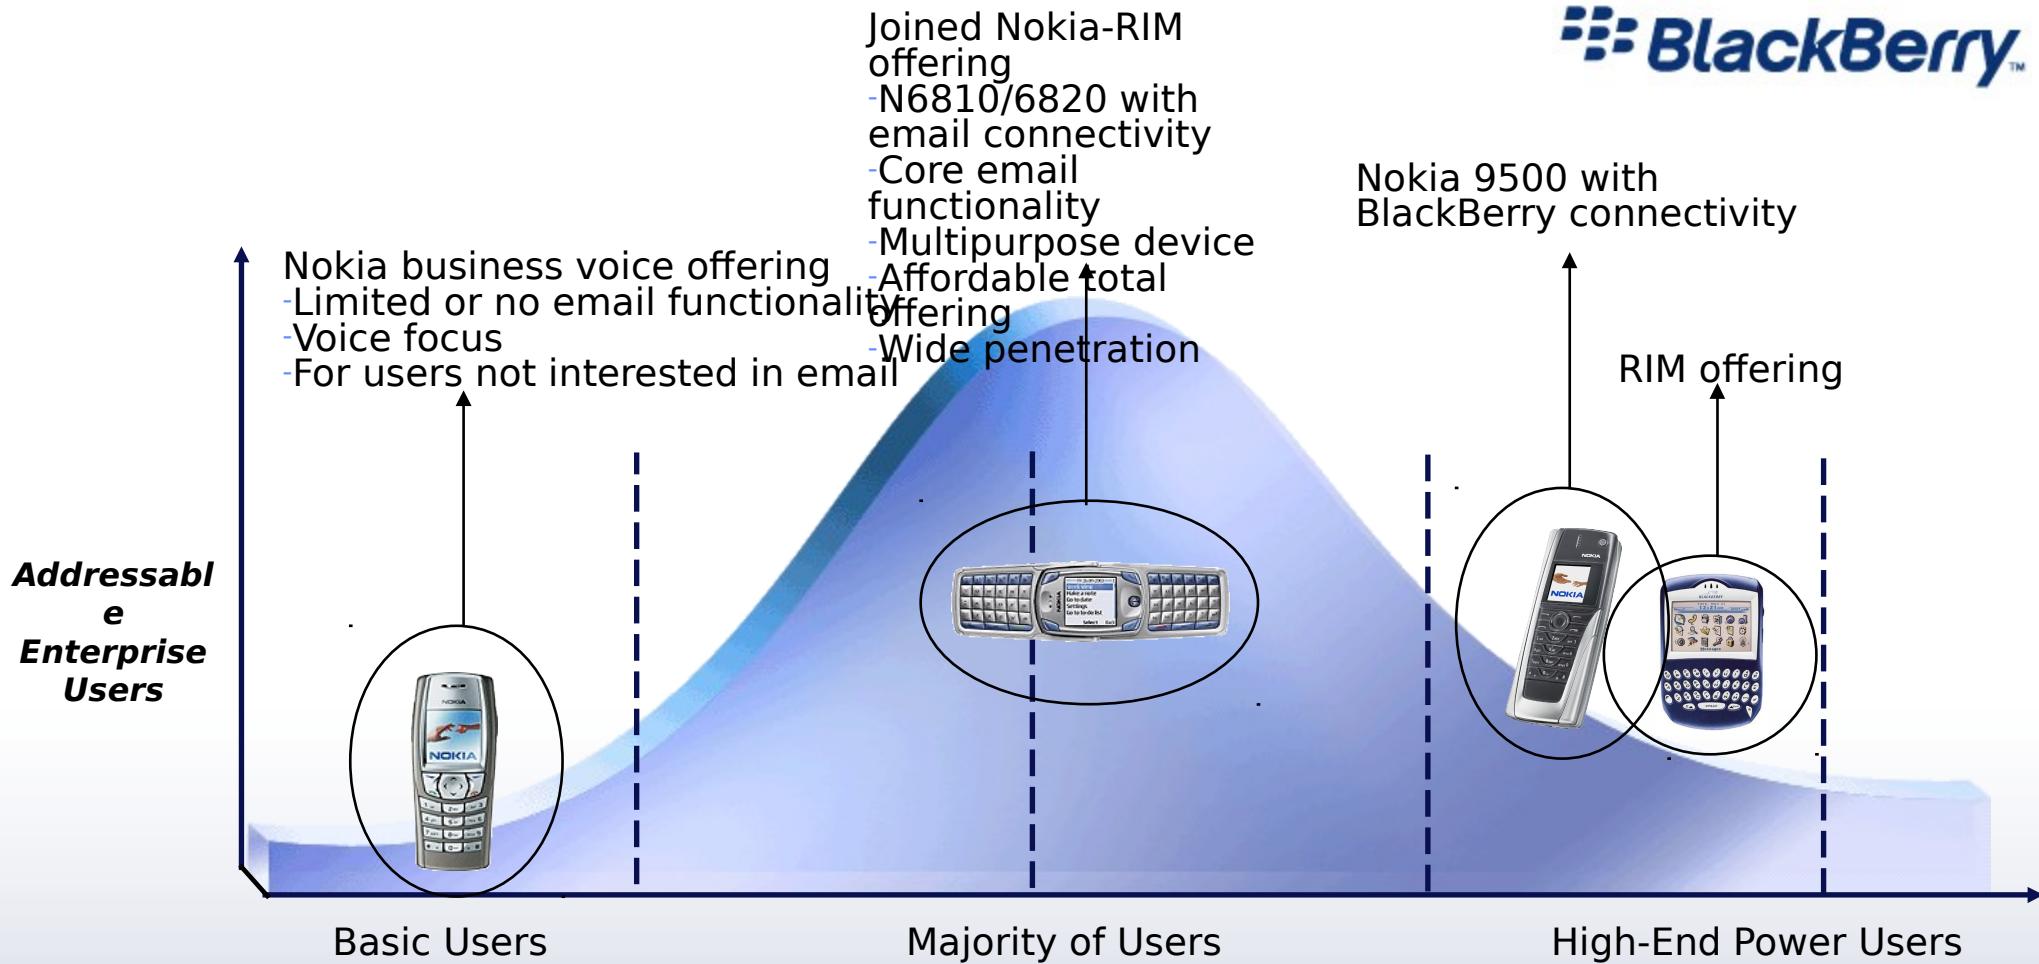

Extending Your Enterprise to Mobilize Business

	Check Point VPN Client	Nokia Mobile VPN	Nokia Secure Access System	Nokia Access
